## **Technical Datasheet**

Water-thinnable 1C coating				
Forced drying possible   Good light and weather resistance   Good initial weather resistance   Suitable for derived timber products	Characteristics	■ Water-thinnable 1C coating		
Good light and weather resistance   Good initial water resistance   Good initial water resistance   Suitable for derived timber products		Application, e.g. in the con-	struction and sanitary sector	
Good initial water resistance		■ Forced drying possible		
Suitable for derived timber products    Einder-Base   Combination of special binders		■ Good light and weather res	sistance	
Binder-Base   Combination of special binders		■ Good initial water resistance	ce	
Colour   All common colour shades		Suitable for derived timber	products	
Gloss value   mat	Technical / Physical Data	■ Binder-Base	Combination of special binders	
Viscosity   5500-7500 mPa.s/ Spindle 6   60 revolution/ min.		Colour	All common colour shades	
Thinner   demineralised water     pH-Vallue   8,3-8,9     Density   1,15-1,25 g/ml     Solid Mass   43-53 %     Solid content in volume   290-310 ml/kg     Material usage   130-140 g/m², Layer thickness 40 μm     Reference colour of the specified values     Reference colour of the specified values     The substrate   according to customer requirements     Pretreatment   The substrate must be free of adhesion-impairing substances such as oil, grease, rust, scale, rolling skin, wax and separating agent residue. Preliminary tests are recommended for assuring the suitability of coating qualities on the substrate. For more stringent requirements, we recommend: for corrosion protection - e.g. phosphating for adhesion - e.g. blasting, pickling, sanding     Structure recommendation   Substrate   according to customer requirements   Top coat   WL1601VW2747   Dry film thickness 60 μm     Mochanical Test   Cross-cut-test DIN EN ISO 2409   Chemical resistance   Needs to be checked. The temperature and concentration of chemicals have a major influence on the test outcome.			mat	
pH-Value		Viscosity		
Density calculated   1,15-1,25 g/ml		Thinner	demineralised water	
Solid Mass calculated		■ pH-Value	8,3-8,9	
Solid content in volume calculated			1,15-1,25 g/ml	
Material usage theoretical, without application loss   130-140 g/m², Layer thickness 40 μm			43-53 %	
Reference colour of the specified values   Colour of WL1601VW2747			290-310 ml/kg	
Substrate    according to customer requirements  The substrate must be free of adhesion-impairing substances such as oil, grease, rust, scale, rolling skin, wax and separating agent residue. Preliminary tests are recommended for assuring the suitability of coating qualities on the substrate. For more stringent requirements, we recommend: for corrosion protection - e.g. phosphating for adhesion - e.g. blasting, pickling, sanding  Structure recommendation  Substrate			130-140 g/m², Layer thickness 40 μm	
The substrate must be free of adhesion-impairing substances such as oil, grease, rust, scale, rolling skin, wax and separating agent residue. Preliminary tests are recommended for assuring the suitability of coating qualities on the substrate. For more stringent requirements, we recommend: for corrosion protection - e.g. phosphating for adhesion - e.g. blasting, pickling, sanding    Structure recommendation			Colour of WL1601VW2747	
rust, scale, rolling skin, wax and separating agent residue. Preliminary tests are recommended for assuring the suitability of coating qualities on the substrate. For more stringent requirements, we recommend: for corrosion protection - e.g. phosphating for adhesion - e.g. blasting, pickling, sanding  Structure recommendation  Substrate  according to customer requirements  WL1601VW2747 Dry film thickness 60 μm  Mechanical Test  Cross-cut-test DIN EN ISO 2409  Chemical resistance  Needs to be checked. The temperature and concentration of chemicals have a major influence on the test outcome.	Substrate	according to customer requ	uirements	
■ Top coat  ■ Top coat  WL1601VW2747 Dry film thickness 60 μm  ■ Cross-cut-test DIN EN ISO 2409 ■ Chemical resistance  Needs to be checked. The temperature and concentration of chemicals have a major influence on the test outcome.	Pretreatment	rust, scale, rolling skin, wax and separating agent residue. Preliminary tests are recommended for assuring the suitability of coating qualities on the substrate. For more stringent requirements, we recommend: for corrosion protection - e.g. phosphating		
Mechanical Test  Cross-cut-test DIN EN ISO 2409  Chemical resistance  Chemical resistance  Needs to be checked. The temperature and concentration of chemicals have a major influence on the test outcome.	Structure recommendation	Substrate	according to customer requirements	
DIN EN ISO 2409  Chemical resistance  Needs to be checked.  The temperature and concentration of chemicals have a major influence on the test outcome.		■ Top coat		
The temperature and concentration of chemicals have a major influence on the test outcome.	Mechanical Test		Gt 0

Our technical data sheets are to provide you with advice based on our latest state of knowledge. This guidance does not release you from your own obligation to test our products for their suitability for your intended purposes and applications. The sale of our products is in accordance with our terms of business and delivery.

	·	prevent skin formation, over-coat with water.		
	Dry film thickness must not	Dry film thickness must not exceed 90 μm - risk of reaction bubbles.		
	Object temperature	10-30 °C		
	Processing conditions	Room temperature 18-22 °C Relative humidity 40-60 %		
	Rolling / painting	as delivered viscosity		
	Over-coating capability	possible with same quality, dry at the earliest after matting		
	■ Cleaning of equipment	Immediately with water - possibly with addition of 5-10 % by weight EFD cleaning agent 400916. Dried-on equipment with org. solvents, e.g. EFD thinner 400424.		
	The standard personal safe painting materials. Detailed data and recommendations	■ Health & Safety at Work guidelines  The standard personal safety precautions must be observed when handling painting materials. Detailed information about dangerous substances, safety data and recommendations concerning Health & Safety at Work and environmental protection can be found in the corresponding safety data sheet.		
Curing	Air drying	at 18-22 $^{\circ}\text{C},40\text{-}60~\%$ relative humidity with air movement		
	Dust drying	after 40 min. (degree of drying 1/ DIN EN ISO 9117-5)		
	Dry to the touch	after 75 Min. (degree of drying 4/ DIN EN ISO 9117-5)		
	■ Full drying	after 7 days (pendulum damping/DIN EN ISO 1522)		
	Oven drying	possible to 120°C		
Resistance to storage	Protect from frost. Open particle of the minimum storage stabiling material does not necessarial However, for quality assurance.	Protect from frost. Open packages are to be used within a short time.  The minimum storage stability of each batch is stated on the product label. The material does not necessarily become unusable if stored for longer than this period. However, for quality assurance purposes, an inspection of these materials is essential to ensure that they are still suitable for the
